

My FGS Legacy Site Restoration Journey

**Step-by-Step Process, Technical
Insights, and Value Delivered in Reviving
a Legacy Website**

Week 1-2: Discovery & WordPress Setup

Site Review

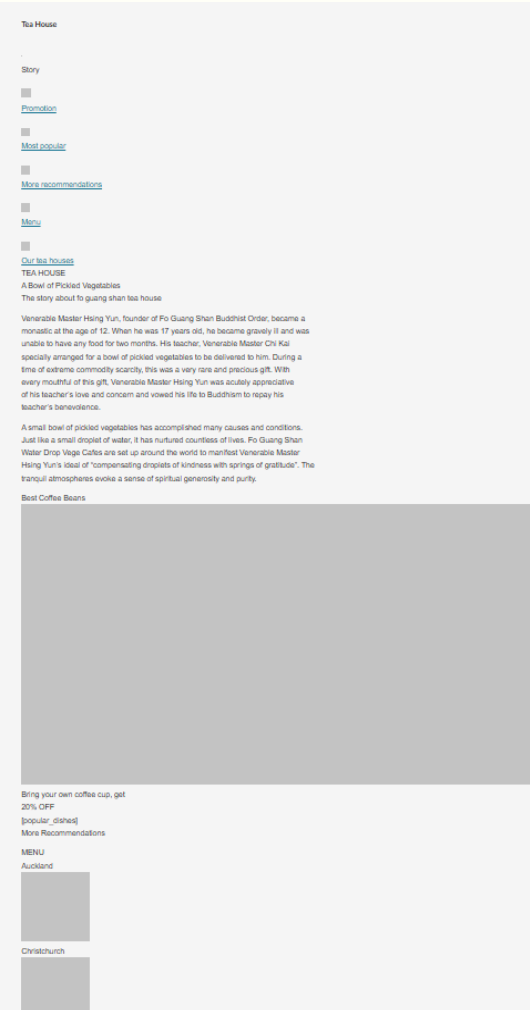

Figma Mock-up Review

WordPress Courses

Notion Tracking Setups

W1-W2: Setup & Discovery

▼ Toggle

- ☒ Set up local dev environment
- ☒ Complete WordPress Beginner Course
- ☐ Explore WordPress theme structure
- ☒ Review legacy site content
- ☒ Analyze Figma design
- ☒ Backup legacy site files + database locally
- ☒ Document plugin conflicts & dashboard errors
- ☒ Map page structure from legacy site
- ☒ Note key learning resources

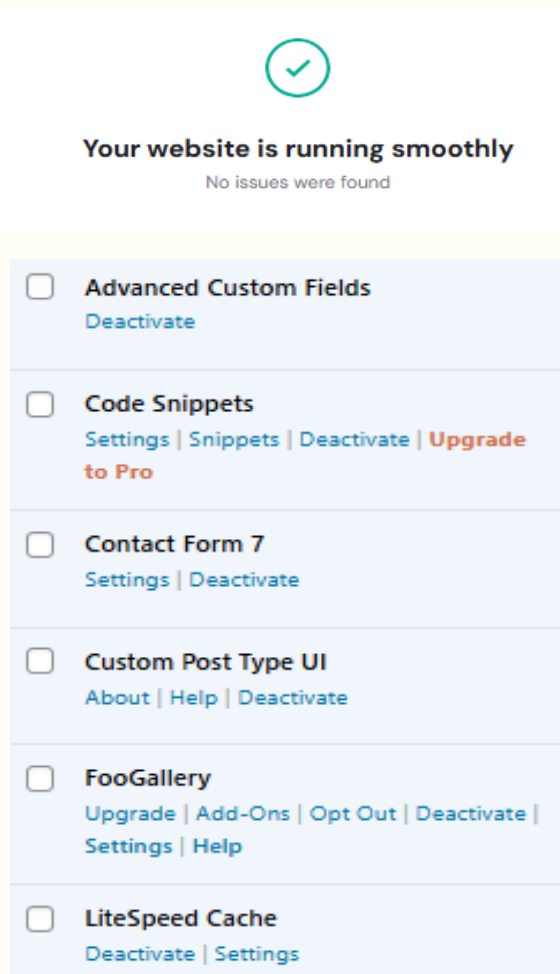

W3-W4: Foundations Build

▼ Toggle

- ☒ Create custom post types (Activities, Events)
- ☒ Install & configure ACF
- ☒ Build reusable card renderer
- ☒ Set up basic routing and templates
- ☒ Define global CSS variables and color palette
- ☒ Create reusable header/footer templates
- ☒ Document database table structure for CPTs
- ☒ Set up staging environment for testing

Nervous and excited diving into the unknown world of restoration, a project built on systems I'd never touched before.

Week 3-4: Architecture & Foundations

This shows my custom post type setup for Activities using CPT UI and ACF. It gave staff control over content without relying on bloated plugins

Post Type	Settings	Supports
Edit Activities (activities) Get code View frontend archive	name: activities label: Activities singular_label: Activity description: "" public: true publicly_queryable: true show_ui: true show_in_nav_menus: true delete_with_user: false show_in_rest: true rest base: ""	title editor thumbnail excerpt custom-fields page-attributes

Great Compassionate Repentance
Dharma Function
25 July
9am-12noon

- Gutenberg + Figma guidance
- Restored WordPress files and reconnected the database
- Fixed broken links, missing media, and corrupted PHP files
- Cleaned out plugin bloat and applied consistent global styles

Lots of learning through trial and error. It was messy, technical, and frustrating but also the turning point where I started feeling more confident in myself.

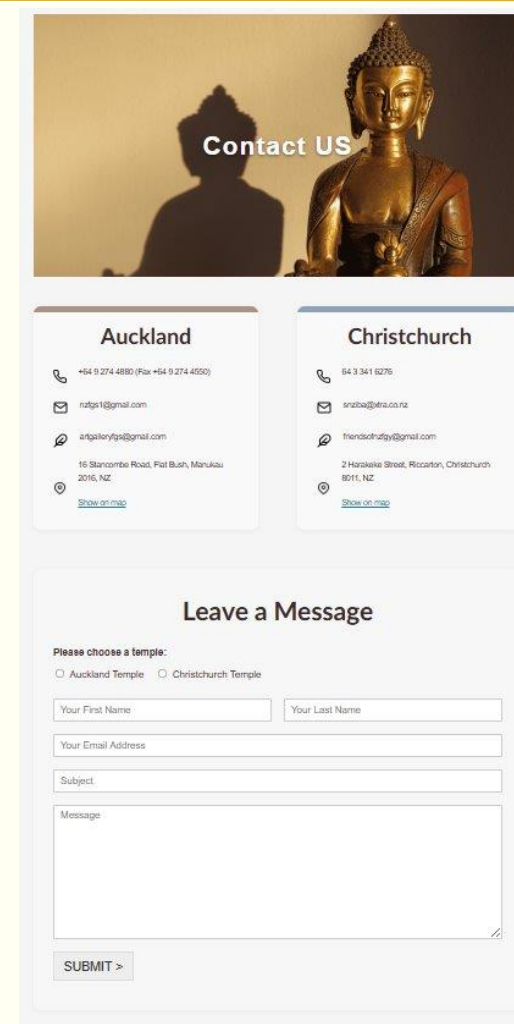

Week 5-6; Restoration & Build

Figma

- Rebuilt Contact, About Us, and Temple Info pages
- Used shortcodes to pull dynamic content from ACF
- Scoped CSS for layout consistency
- Started thinking like a developer: systems, not just fixes

After

The challenging part for me these weeks has been that progress isn't always visible

Week 7-8: QA & Ongoing Refinement

From tangled legacy to something clear, stable, and ready to grow

Venerable Master Hsing Yun

Venerable Master Hsing Yun was born in Chiangxu province, China, in 1927. He was tonsured under Venerable Master Chih Kai at the age

Venerable Master Calligraphy

FGS World Wide

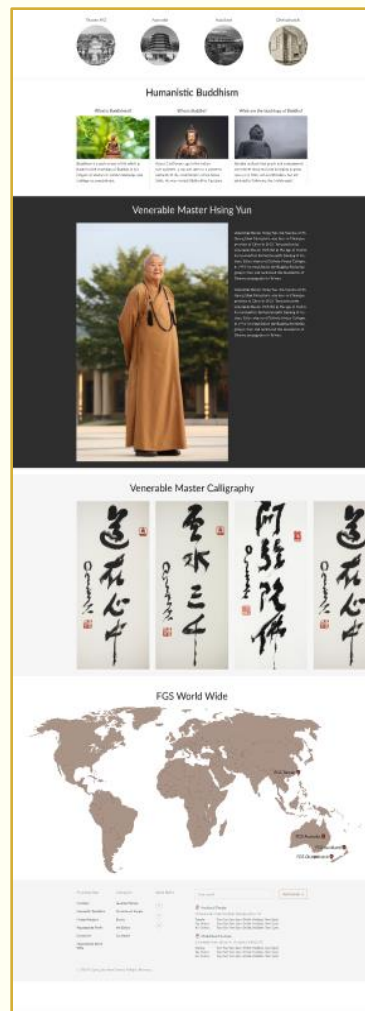

Temple Info	Desktop	Gallery images misaligned	Updated grid layout & margins	✓ Fixed
Contact	Mobile	Form labels overlapping inputs	Increased spacing and font size	✓ Fixed
Events Archive	Mobile, Desktop	Event card titles cut off	Added text wrapping & padding	✓ Fixed
Contact	All	Anchor links causing page jump	Planned: add smooth scroll + header offset	🔧 In Progress
Home	Mobile, Desktop	Page jumping when clicking hero anchors	Planned: add CSS scroll-padding-top	🔧 In Progress

- **Began full QA across devices and browsers to check responsiveness and layout flow**
- **Identified ongoing issues like page jumping and plugin behaviour still needing attention**

Week 9-10: Final Polish and Presentation Prep

- Cleaned up redundant CSS and fixed short code logic
- Organized documentation for clarity and maintainability

Figma

After

- Realized: project is “done” when it’s maintainable, not just visually complete
- Noted all plugin lists, backups, and work flow steps

I wasn't just fixing a website — I was rebuilding my own understanding of how systems connect, break, and come back stronger

Value Delivered

Technical:

- **WordPress restored with working backend & database**
- **3 major pages rebuilt using modular CSS & ACF**
- **Legacy media recovered via FTP**

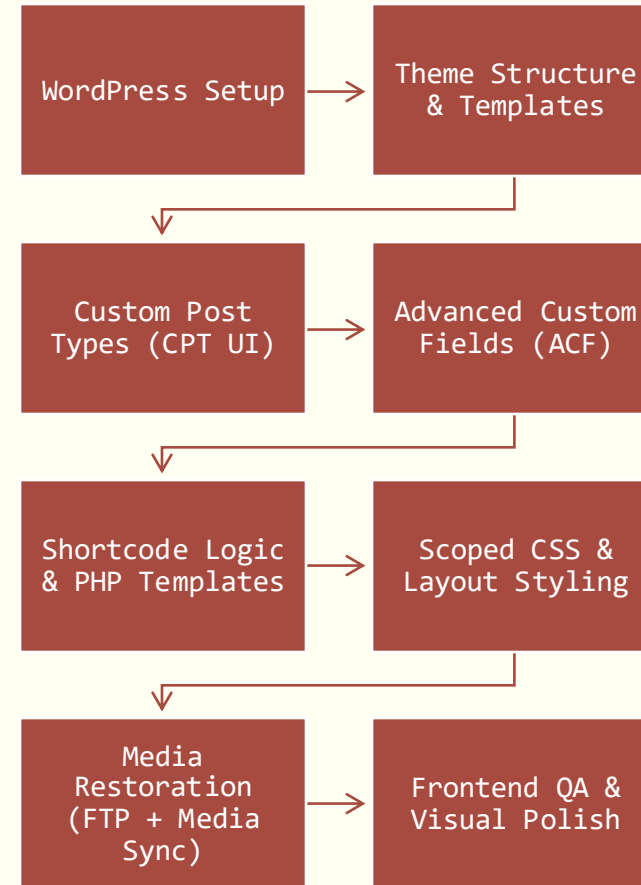

Professional:

- **Clear documentation & version tracking**
- **Improved accessibility & responsive design**

Personal:

- **Gained confidence with PHP, WordPress & databases**
- **Strengthened resilience through problem-solving**

My Restoration Workflow

What started broken now stands rebuilt — and so do I.

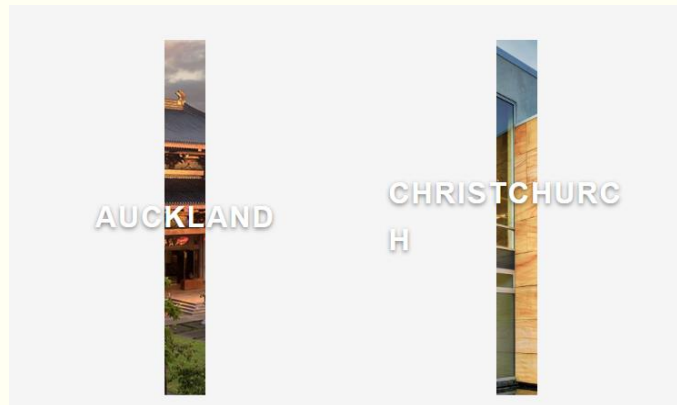

What's next?

Restore

Refine

Ready for
Growth

- Replace placeholder images with final media
- Refine responsiveness with mobile-first testing
- Explore simplifying theme & plugin structure
- Audit accessibility: contrast, alt text, keyboard flow
- Finalise QA tracker and handover documentation
- Review CPT + ACF setup for long-term scalability

Continuous improvement matters. A good website evolves — just like the developer behind it.

Key Learnings & Reflections

- **Soft skills & Reflections**

- **At times I didn't know how to ask for help or fully understand what I was doing. This pushed me to experiment, learn by doing, and develop problem-solving confidence.**
- **Much of my time was spent learning rather than building, but that learning made the final product possible.**
- **I now feel much more confident in handling legacy WordPress projects and troubleshooting unknown systems.**

Technical growth:

- **Scoped CSS for modularity easier to maintain and debug.**
- **Custom post types + ACF shortcodes dynamic content management for events and activities.**
- **FTP and Media Sync restoration learned how to recover legacy media reliably.**
- **Debugging PHP and plugin conflicts understanding WordPress's backend architecture.**

Workflow improvements:

- **Agile planning and Notion tracking breaking down tasks helped manage blockers.**
- **QA process learned how much testing and refinement really takes.**

Planned Deliverables

 **GitHub Repo: <https://github.com/Cess-stack/fgs-nz-site-restoration.git>**

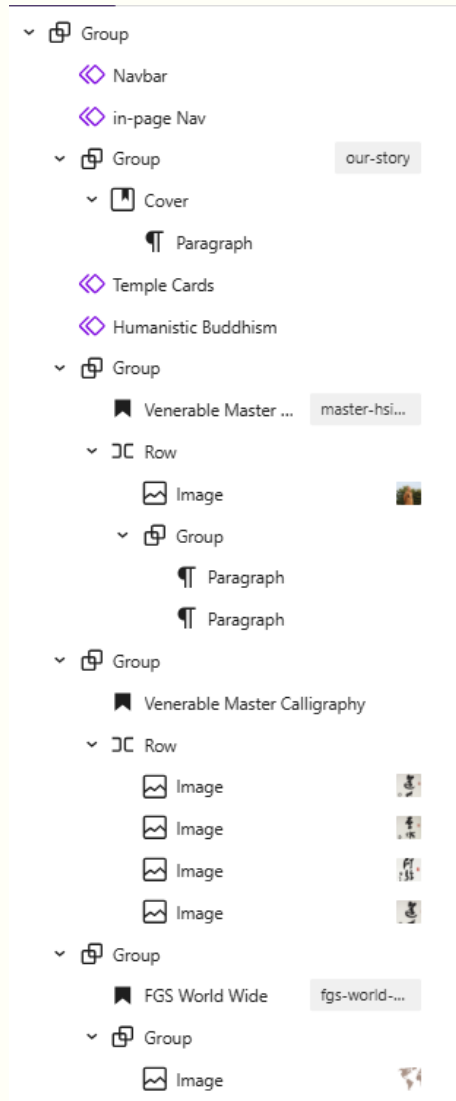

Deliverables included in GitHub repo /docs folder:

- 10 Week Plan Updated.pdf – final roadmap
- 10 Week Summary.pdf – project overview
- Blockers.pdf – key challenges and resolutions
- Events Setup.pdf – custom CPT + shortcode logic
- Learning Log.pdf – technical growth and reflections
- Notion QA Tracker.pdf – device testing and layout fixes
- Final Presentation Slides.pdf – board-ready with speaker notes

Persistence, structure, and reflection make lasting impact—in code and in life.

- Kia Ora, please find all screenshots regarding my **L6 C.Taplin – Written Report.pdf** on these next pages over (:
- These screenshots aren't just visuals they're a window into my project journey. Each one ties back to the written report and the slides, highlighting key moments: stakeholder mapping, architectural decisions, accessibility fixes, QA tracking, and even personal reflections.
- I've chosen a variety of evidence, from FTP recovery and modular CSS updates to Notion workflows and presentation drafts, to show not just what I did, but how I approached it. They reflect both the technical work and the way I stayed grounded, solution-focused, and open to feedback throughout the process.
- Together, the report, slides, and screenshots tell a story: a solo developer restoring a legacy WordPress site with care, clarity, and long-term vision. They show how each decision, each piece of feedback, and each iterative improvement shaped the final outcome and how communication, collaboration, and resilience were woven into every step.

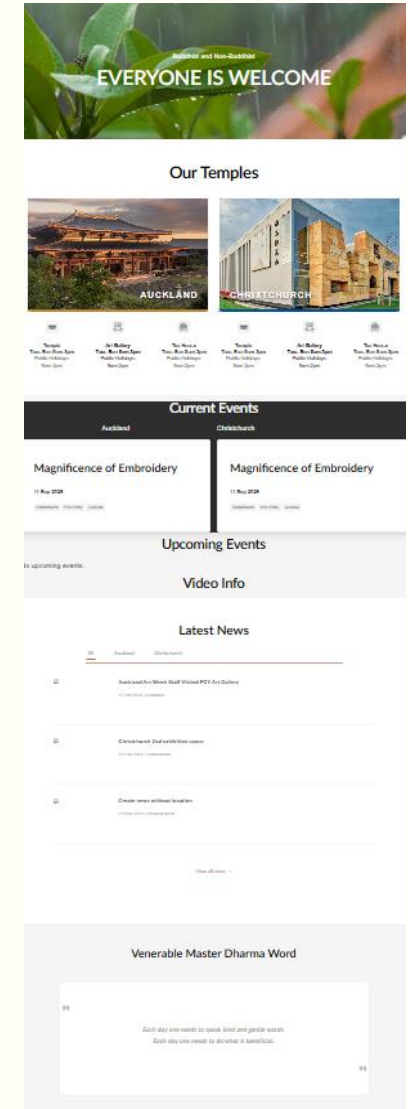

Q1. Project Requirements

This left panel outlines the modular structure I used to keep fgs content maintainable and scalable.

About and Home Pages fully restored and functioning again.

Q2. Best Practises

This shows my Notion task board, where I tracked weekly goals, blockers, and technical focus.

It helped me stay organized and apply Agile-style planning even while working solo.

Documentation & Reference

- Page Handover Summary
- Weekly Learning Log
- WordPress + PHP Learning Notes
- FGS Events - Dev Cheat Sheet
- Event Cards & Page
- Notion QA Tracker. Weeks 7–8
- Errors, Issues, Blockers
- Plugins
- Resources & Links

Date	Issue	Description	Status / Fix
Week 1 – Onboarding & Setup (July 22)	No onboarding / solo setup	Inherited a project with no team, limited context, and no clear starting point.	Began mapping the project in Notion and created a Week 1 action plan.
Week 2 – Access & Restoration (July 29)	Delayed access to correct FGS folder and SQL database	No access to actual project environment until late Week 2. Studied WordPress and PHP basics while waiting	Restoration tasks began immediately after but slightly behind schedule.
Week 2 – Access & Restoration (July 29)	SQL file too large to import	Database .sql file exceeded phpMyAdmin's size limit on Hostinger.	Planned to use BigDump or contact support for import options.
Week 2 – Access & Restoration (July 29)	Unclear restore order	Unsure if FGS files or SQL DB should go first.	Clarified correct order: import DB → upload FGS folder → config check.
Week 2 – Access & Restoration (July 30)	Live site showing default WordPress	fgs.alankan.net loaded basic install instead of full project.	Confirmed missing SQL and theme files were the cause.
Week 2 – Access & Restoration (July 30)	Couldn't find import DB option	Struggled to locate SQL import in Hostinger dashboard.	Found it under phpMyAdmin in Databases.

```
/* ===== OUR TEMPLES SECTION - FRONT PAGE ===== */

/* Section Wrapper */
.temple-section {
  background: #fff;
  padding: 80px 20px;
  text-align: center;
  max-width: 1200px;
  margin: 0 auto;
}

.temple-section h2 {
  font-size: 2.2rem;
  font-weight: 600;
  color: #222;
  margin-bottom: 50px;
}
```

```
/* ===== DHARMA WORD SECTION ===== */

/* Outer full-width container */
.dharma-section {
  background-color: #f5f5f5;
  display: flex;
  flex-direction: column;
  align-items: center; /* centers child group */
  justify-content: center;
  padding: 5rem 0; /* remove side padding */
  width: 100%;
}
```

```
/* ===== LATEST NEWS SECTION ===== */

/* Section wrapper */
.news-section {
  background: #fff;
  padding: 80px 20px;
  display: flex;
  justify-content: center;
}

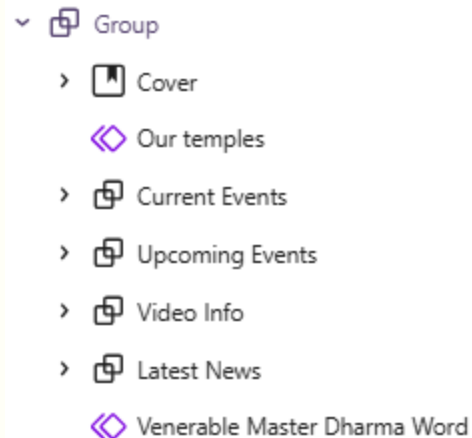

/* Inner wrapper */
.news-wrapper {
  max-width: 1000px;
  width: 100%;
  display: flex;
  flex-direction: column;
  align-items: center;
  gap: 32px;
}
```

These show my modular CSS setup, where each page or component had its own scoped file. It made debugging easier and kept styles maintainable

Please also refer to slide #3 for additional SS

Q3. Design Thinking

I tested accessibility using mobile previews to ensure the site was inclusive and easy to navigate for all users. Heres a mobile view of the front-page.

- Backend block editor
- Clear groupings and labels to make content easy to manage for non-developers
- List View reflects modular thinking and empathy for non dev staff who will maintain the site this

Q4 & 5. Agile Mindsets

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
29 Sep	30 11:30 AM Daily Standup	1 Oct 1 PM Weekly checkin	2	3 10:30 AM Sprint	4
6	7 11:30 AM Daily Standup	8 2 PM Weekly catch up	9 12:30 PM FGS - Final F	10 10:30 AM Sprint	11
13	14 11:30 AM Daily Standup	15	16	17 10:30 AM Sprint	18

Regular stand-up/check-in notes showing communication, progress updates, and blockers discussed

Having a solid work routine helped me focused, and also prioritise my time wisely

Daily Routine ♦

☐ Quick end-of-day log: blockers, wins, questions

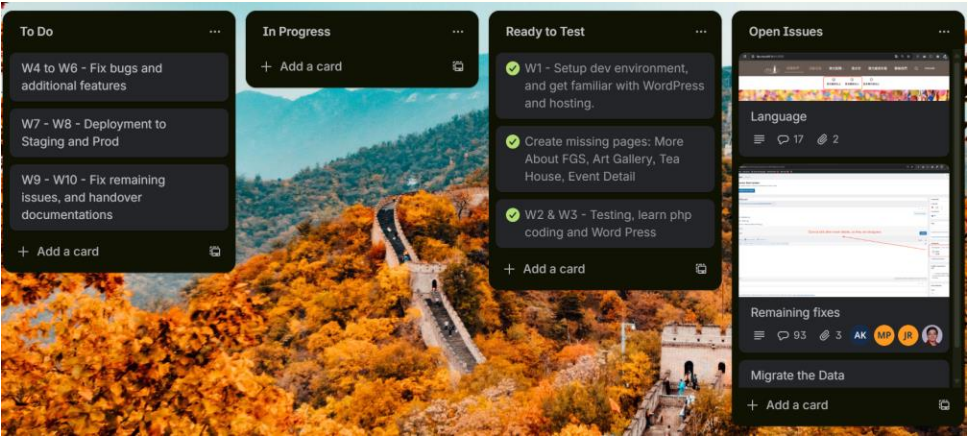

☐ Morning review of Notion board for priority tasks

☐ Track weekly learning points in WordPress/PHP log

Staying consistent, staying focused!!

Time Slot	Focus Area
🕒 9:30am–2:00pm	Build & test
🌙 9:00pm–11:00pm	Polish & review

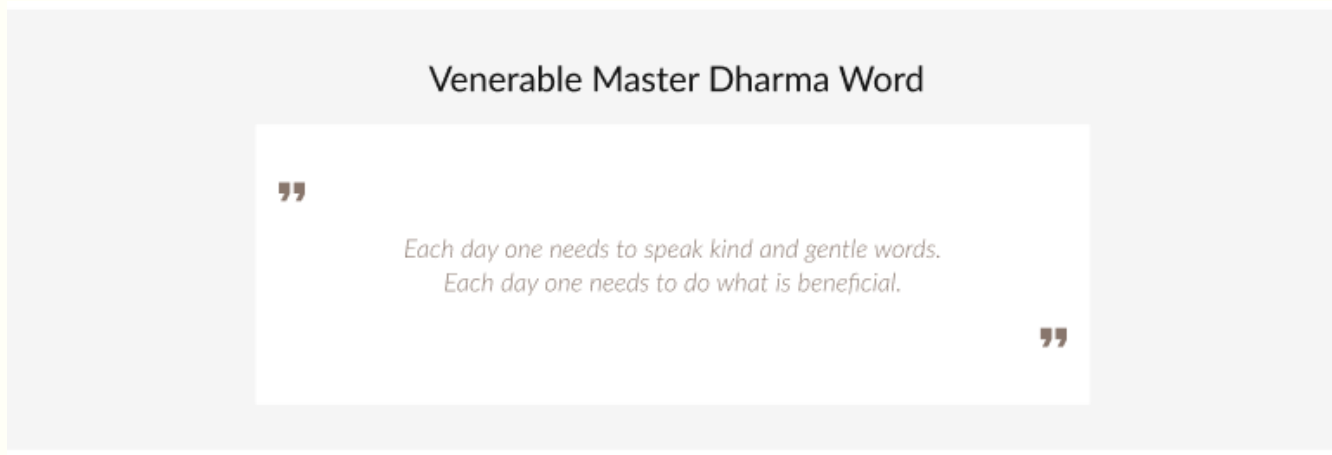

Trello board showing tasks tracked and iteratively completed, reflecting Agile workflow

Q6. Stakeholder Overview (My Perspective): This table outlines the key stakeholder groups I considered throughout the FGS restoration. It reflects my own thinking about their roles, needs, and level of involvement, and helped guide my decisions around usability, architecture, and communication

Stakeholder Group	Role/Interest	Level of Involvement
FGS Leadership	Public-facing brand and stability	High
Staff/Admins	Backend usability and content updates	High
Temple Visitors	Clear navigation and accessible content	Medium
Mentor (Jai)	Technical guidance and feedback	High
Sponsor (Alan)	Oversight and support	High
Future Developers	Maintainability and documentation	Low

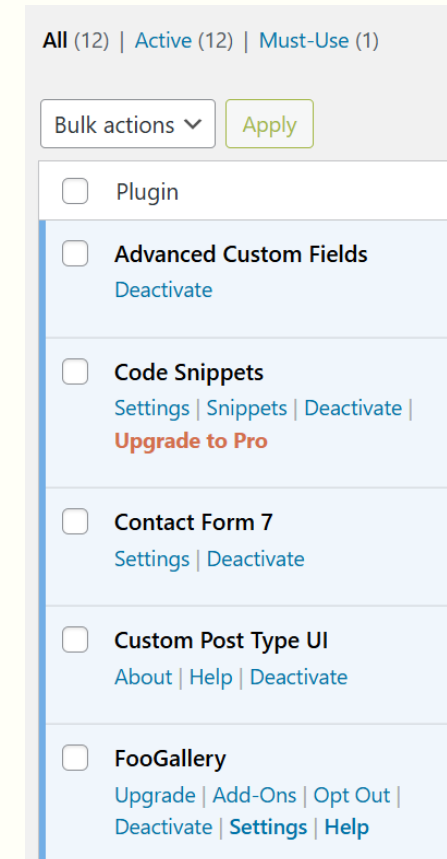

Q7. Ethical considerations

↕

Design choices reflecting
cultural sensitivity and
alignment with FGS's values

Privacy-conscious decisions including
plugin cleanup and removal of
unnecessary data collection

Actively listening and reflecting on stakeholder feedback helped me refine solutions and respond effectively

Q8. Communication & Q9. Collaboration

Hi Alan, I just wanted to be open and let you know I have not been 100 percent present on my project since Friday after a meeting. My son was stood down for physical harm towards another child as well as being bullied himself. We had a meeting at the kura today about Friday's incident and it went awesome. He asked to stay so I left, but not long after I got called back because he had left the school grounds onto a rural road which was really unsafe. After picking my son up we were super emotional, the rest of my day was spent ringing around for help and support, booking a doctor's appointment, counselling referrals, and settling him down again. So I just wanted to apologise again for not being present on my project tomorrow and I'm keeping my son home so he can rest and I know he is safe. Arohamai & Ngā Mini, Cess.

Alan Kan 18/08 4:20 pm

I'm sorry to hear about what happened to your son Cessie. I hope things will turn out ok. Please take the time you need to attend to family first.

Let's skip the stand up tomorrow and catch up on Friday.

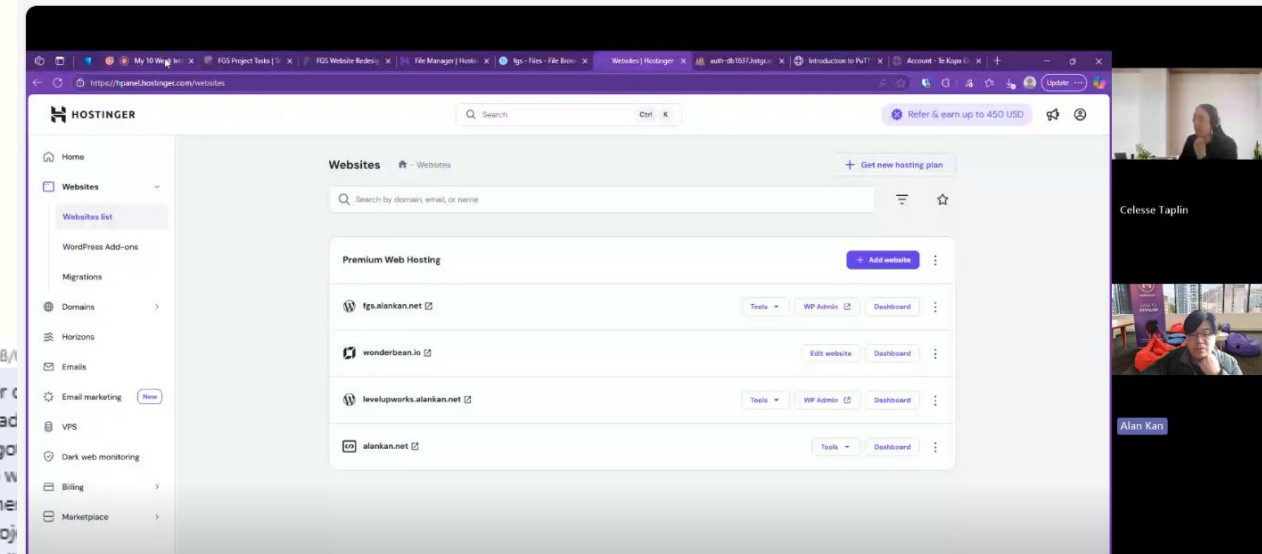

Jai Ivarsson (External) 30/07 3:04 pm

Want to jump on a quick call?

Weekly calls with my mentor and sponsor helped me share blockers, discuss progress, and stay aligned with project requirements

Sprint review & Planning

Friday, 1 August 2025 10:30 am - 11:00 am

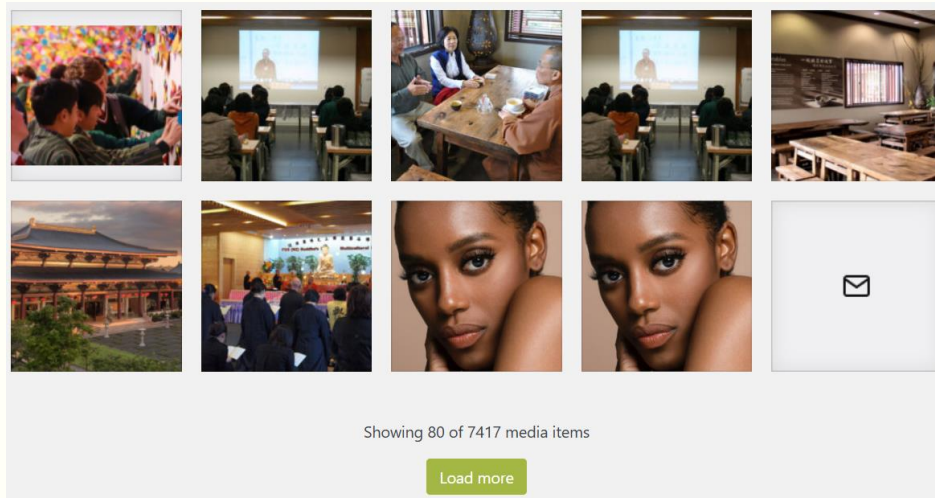

30/07 2:05 pm

Hey Jai, I'm having trouble uploading my sql database file to phpMyAdmin I've tried troubleshooting myself and am currently going in circles lol and I don't want to waste any more time so I thought I'd reach out for some guidance when you're free. Prettiest please and thank you 🙏

30/07 3:15 pm

Yes please Jai I'm home around 3.40 of that works otherwise I'm happy to wait until you're free 🕒

Q10. My Contribution

Manual media recovery using FTP and Media Sync
to restore legacy assets

Custom event system
built with CPT UI, ACF,
and shortcode rendering.

This was one of my
proudest contributions –
designed from scratch to
give staff full control over
event content without
relying on bloated
plugins. It reflects
architectural thinking,
modular design, and a
future-proof approach to
WordPress development.

How to Use This Map

- Need to add a new event? → Add in activities CPT, assign featured-events category, set event_priority.
- Need to change order? → Edit event_priority in ACF.
- Need to change layout? → Edit PostX block settings or theme template.
- Need to fix missing images? → Use Media Sync.
- Not seeing changes? → Clear LiteSpeed cache.

FGS Events - Visual Map

This helps me to show visually how all these parts connect. T

[CPT UI] — registers → [activities CPT ("Events")]

— Taxonomies: Categories + Tags (WP Core)

— "featured-events" category → used for homepage/current events grid

[ACF] — adds custom fields:

— event_priority (Number) → controls sort order

— location (Text/Select)

— date/time fields (if present)

[PostX] — displays Events in grids:

— Query Settings → Post Type = activities

— Filter by category = featured-events

— Order by = event_priority (ASC)

— Styling → matches Figma card specs

[Theme Templates] — render archives/singles:

— archive-activities.php → archive.php → index.php

— single-activities.php → single.php → singular.php → index.php

[LiteSpeed Cache] — must clear after changes

[Media Sync] — restores missing event images

[FooGallery / WPForms] — optional:

— FooGallery → event photo galleries

— WPForms → event registration/contact forms

Q11. My Learnings and Future Employment Impact

Everything shown in my slides from task tracking and Notion boards to presentation drafts and QA updates – reflects these key learnings and demonstrates how they guided my decisions throughout the project

Communication is key

Sharing blockers, wins, and asking for guidance keeps projects on track.

Collaboration strengthens outcomes

Working with stakeholders and mentors improves decisions and provides support.

Agile practices keep projects manageable

Iterative updates and task tracking make complex projects achievable.

Ethical and inclusive design matters

Accessibility fixes, privacy considerations, and clarity make solutions more sustainable.

Resilience and reflection

Balancing solo work and personal challenges builds problem-solving and adaptability.
