Page Handover Summary

Final Update – FGS Legacy Site Restoration

Prepared by: Celesse Taplin
Date: Tuesday, 7 October 2025

Project Scope

This restoration involved rebuilding a legacy WordPress site with broken architecture, missing media, and outdated plugin dependencies. The goal was to deliver a scalable, maintainable, and visually polished system aligned with modern development standards.

Published and Complete – Restored Foundation

The following pages are fully rebuilt, published, and structurally sound:

- Contact Us – rebuilt with WPForms integration, responsive layout, and scoped CSS

- About Us – complete with anchor navigation and design fidelity

- Auckland Temple 2025 – published with map, opening hours, dress code, and events

- Christchurch Temple – published with updated layout and content

- Art Gallery – carousel built, scoped styling applied, placeholder images inserted

- Tea House – block structure complete, story and promotional sections styled

- Events – custom archive template implemented with shortcode-based rendering

- Home Page – published and styled to match Figma layout

- Navigation Strip – finalized block structure and validated CSS

- CSS Architecture – modularized into page-specific and component-level files
- Anchor Navigation System – implemented across key pages using HTML anchors

Completed with Styling in Progress

These components are built and functional, with final polish underway:

- Art Gallery Carousel – awaiting final image sourcing and hover effect polish
- Tea House Menu Section – responsive tweaks and layout spacing in progress
- Event Cards – styling and responsive grid polish underway
- Event Detail Page – templated and queued for styling and linking

In Progress – Final Enhancements

- Image Recovery – sourcing missing legacy images for gallery and promotional sections
- QA Testing – validating layout, anchors, and responsiveness across devices
- Walkthrough Prep – preparing a confident, presentation-ready site tour
- Optional Enhancements – filters, pagination, and translations (post-launch)

Technical Highlights

- Legacy media restored via FTP and re-indexed with Media Sync
- Scoped CSS naming conventions applied across all pages
- Plugin dependencies removed for cleaner performance
- Carousel implemented with SwiperJS
- Hosting server cleaned and optimized
- Custom event system built from scratch for full layout control

This restoration reflects a scalable, maintainable foundation aligned with modern WordPress architecture. The site is functional, presentable, and ready for final polish. A clear roadmap is in place to complete enhancements and deliver a walkthrough-ready product.

The site is no longer a patchwork of legacy plugins it's a clean, scalable system with architectural clarity and full editorial control. The foundation is restored, the core pages are published, and the roadmap for final polish is clear.

🎯 Immediate Priority – Final Polish & Strategic Recovery

Despite restoring thousands of legacy media files via FTP, **several key images remain missing or unusable** due to:

- Broken thumbnails and corrupted uploads

- Inconsistent or unclear file naming

- Lack of original source documentation

These missing assets affect:

- **Art Gallery carousel** – awaiting final image sourcing and hover effect polish

- **Tea House promotional sections** – layout and visual storytelling incomplete

- **Event cards and detail pages** – styling and content validation pending

To ensure a confident walkthrough and handover, the following priorities are now in motion:

- 🔍 **Image Recovery** – sourcing viable replacements or placeholders for broken assets

- 🧪 **QA Testing** – validating layout, anchors, and responsive behavior across devices

- 🧭 **Walkthrough Prep** – rehearsing a clear, architectural site tour for board presentation

- 🧰 **Optional Enhancements** – filters, pagination, and multilingual support (post-launch roadmap)

Next Steps – Post Submission Roadmap

With the core restoration complete and the site ready for handover, the following steps outline the post-submission roadmap:

- **Board Walkthrough** – Deliver a clear, confident site tour highlighting architectural wins, restored features, and editorial control

- **Image Sourcing** – Continue sourcing viable replacements for missing gallery and promotional assets

- **QA Refinement** – Monitor feedback from board reviewers and apply final layout or accessibility tweaks as needed

- **Optional Enhancements** – Explore post-launch additions including filters, pagination, and multilingual support

- **Documentation Archive** – Maintain GitHub /docs folder with slides, written report, Notion export, and QA tracker for future reference

- **Portfolio Integration** – Add this project to personal portfolio with technical highlights, screenshots, and architectural reflections
